

Register of personal data processing activities:

Sovereignty (Local hosting): "We have chosen to host n8n locally. No user data is transmitted or stored with an uncontrolled third party or other companies."

Article 13 - Information to be provided when personal data is collected from the data subject

When personal data relating to a data subject is collected from that data subject, the data controller shall provide them, at the time the data is obtained, with all of the following information:

Measure implemented:

By asking the AI agent present, the user is able to retrieve the data they have provided to our service, such as their email address, their areas of interest, or the date the newsletter was sent (it is normal that the password is not provided).

Article 17 - Right to erasure ("right to be forgotten")

The data subject has the right to obtain from the controller the erasure of personal data concerning him or her without undue delay, and the controller has the obligation to erase such personal data without undue delay.

Measure implemented:

We have therefore implemented an unsubscribe option for our newsletter via email. If the user requests deletion, their information is instantly and permanently removed from the database.

Article 156 – Data minimization.

The principle of data minimization stipulates that personal data must be adequate, relevant, and limited to what is necessary for the purposes for which it is processed.

Example: Collecting and storing an employee's marital status is not considered necessary for HR activities.

Measure implemented:

We only store in our database the information necessary for sending the newsletter, such as email address, interests, and timeframe. Nothing more, nothing less.

Article 32 - Security of processing

Taking into account the state of the art, the costs of implementation, and the nature, scope, context, and purposes of the processing, as well as the risks, which vary in likelihood and severity, to the rights and freedoms of natural persons, the controller and the processor shall implement appropriate technical and organizational measures to ensure a level of security appropriate to the risk, including, but not limited to, as needed:

Measure implemented:

We have implemented the management of a password and a session ID specific to each user so that the AI is unique to the user's connection. This prevents identity theft without using a full authentication system.
